PROJECTS MONITORING TOOL USING KHALIFASAT IMAGERY

Abstract

Urban growth analysis is assuming critical importance in planning activities knowing that in 2015 more than half world's population will be living in cities. Urban sprawl is a term that refers to spreading urban growth. This phenomenon affects the majority of worlds' metropolitan areas and is associated to the replacement and fragmentation of natural habitats and agriculture lands by infrastructures, residential and commercial development.

The aim of this study is to discuss about the projects monitoring tool and its results.
