RESEARCH ON PSYCHOLOGICAL CHANGES AND GROWTH OF CHILDREN THROUGH
EDUCATION RELATED TO COMMERCIAL SPACE BUSINESS

Abstract

My company's business is to train space flight attendants to accompany commercial space travel and to provide full support, including before and after space travel, mainly for Japanese customers. In parallel with my main business, I provide online education on commercial space business for elementary school students. Currently, we have students who have been taking the course for 22 months at the longest, and 9 months at the shortest, and we can feel their psychological changes and growth. In this paper, I will discuss the results of several questionnaires from parents and students, actual impressions, and my own considerations as an instructor.
