ACROSS THE UNIVERSE TOWARDS HUMAN BODY AND MIND WITH FREQUENCY OF
HARMONY. THE M-THEORY.

Abstract

Science and geometry have always developed parallel and interpenetrated. The orbits of the planets around the Sun can be represented by ellipses as a result of the law of gravity, what implies an interwoven relationship between the form of an object and the forces acting on it. The author's empirical observations and researches led to the notion of a very important combination connecting a horizontal pendulum motion with a vertical harmonic oscillator, which with a pendulum lens as a human body lying in it, create harmony in the observed resonant frequency and period by representing two values of the number Phi, as a possible pattern of incessant space fractal transformation, inner force of nature and the matrix of life creation. Feynman's fine structure constant can relate this golden ratio to quantum physics, leading to quantum biology and perhaps further to the general theory of unification theory or M-Theory.
